

SEAWAY NOTICE NO. 15 - 2021

LOCKAGE PROCESS WITHOUT MOORING LINES

The following is the procedure for single tugs, tug/barge combinations, and small ships (<160m) that are not HFM eligible and have agreed to be processed without mooring lines at the Canadian Locks:

- When the ship is at the L/A2, the lock operator will communicate with the Captain/Pilot to confirm that no mooring lines will be deployed for the lockage and to provide the ship's final stop position in the lock.
- The ship must proceed to its final stop position and maintain its position along the tie-up side of the lock.
- Once the ship is in position, the operator will notify the Captain/Pilot that the lockage will start.
- All upbound lockages without lines will be done as a **slow fill**.
- Once the outbound gates are fully open, the operator will advise the Captain/Pilot to exit the lock.
