Update on Clarence Street Bridge (Bridge 21) in Port Colborne

Work is underway at the Clarence Street Bridge (Bridge 21), with repair activities in progress and operational testing planned over the coming days, including into the weekend.

Our teams are making strong progress and are focused on restoring the bridge to service as quickly and safely as possible.

The public may observe increased activity on site, including bridge movements, as testing advances. We know this situation is impacting the community and appreciate everyone's patience as work moves forward.

We will provide updates as progress continues and expect to share timing information once testing is complete.
